

FLUKE®

If I'm not back in an hour, send help.

This could be a tough one.

That's why I'm bringing my Fluke.

The only documenting process calibrator worth taking seriously.

There's no time to waste. No room for error.

**It gives me pressure, temperature, milliamps — whatever I need.
And records it all.**

So I don't have to go back again.

Nobody said this was going to be easy. But someone has to keep the plant running safely. So naturally, you insist on a Fluke 700 Series DPC.

The 700 Series DPCs are rugged, handheld tools for sourcing or measuring practically everything — temperature, pressure, voltage, resistance, current, and frequency. No matter where you are or what you're doing, troubleshooting, maintenance, or documentation. It's simple.

Plus we've automated your tasks. The 702 performs pre-programmed procedures, stores helpful information, and captures data. So you don't have to fumble with pen and paper. You can concentrate on safety.

What's more, our PMLink™ software helps you document results in compliance with EPA, FDA, or OSHA regulations, and ISO 9000 quality standards.

Whether you're in the field or in the shop, you can handle just about anything with your Fluke 700 Series DPC.

The 702 is compatible with Fluke PMLink software and popular information management systems like Cornerstone from Applied System Technologies and gateway from Honeywell Loveland.

Get your hands on one today. For complete information on our 700 Series DPCs, or our free App Note on transmitter calibration, call 1-800-44-FLUKE.

FLUKE®

We know there's no such thing as a **perfect network.**

But the right management **tools** can put the odds **in your favor.**

Fluke network tools. The perfect complement to a comprehensive network maintenance strategy.

Where the next network problem will spring up, nobody knows. But one thing is certain, with a little bit of help from Fluke network tools, maintenance and troubleshooting are a whole lot easier.

Enterprise LANMeter

No single tool will solve every network problem. But good troubleshooting tools are the basis of a strong maintenance strategy. And Fluke's are among the best.

For example, our Enterprise LANMeter with SwitchWizard option, the first portable network management device that lets you see inside switches. The DSP-100, the world's first digital cable tester. And our new One Touch Network Assistant for front-line troubleshooting and Fast Ethernet cable testing.

DSP-100 digital cable tester

In fact, over the past three years, our network tools have won more awards than any others in the industry. In short, they're your best bet.

For more information on the entire Fluke family of network maintenance tools, or a copy of the executive summary of the new Infonetics study on the **7 Best Network Maintenance Practices**, call **1-800-44-FLUKE** today.

The new One Touch Network Assistant

To make a bundle

in fiber optic cable,

you don't have to

spend one on a new meter.

FLUKE®

**Fluke's new Fiber Optic Meter
accessory lets you
test fiber optic cable with
your digital multimeter.**

Fluke's new fiber optic power
meter accessory plugs right into

your digital multimeter. So you
can test fiber optic cable and test
it fast – with highly reliable and
accurate readings in seconds.
Best of all, it comes from Fluke,
so you know it's rugged and
built to last. For more informa-
tion, call **1-800-59-FLUKE** to

be connected to your local dis-
tributor, or **1-800-FLUKE FAX**
for a data sheet.

*Fluke's Fiber Optic test
accessories include the Fiber
Optic Meter, light sources,
and cables. Complete pack-
ages start at under \$500.*

FLUKE®

It was the kind of week that grinds you down.

Hard on the back.
Hard on the family.

Machines have no respect
for your personal life.

Still, I'm proud of the job
I do. I just want to spend
less time doing it.

So a Fluke Graphical
MultiMeter is the tool
I carry.

It speeds up the work.

Now maybe I'll get home
while there's still some
daylight left.

Yeah, you'll probably have other tough weeks. But try spending one with a Fluke Graphical MultiMeter (on us). It'll change your attitude.

This tool does it all. It's a 4-2/3 digit multimeter, a 1 MHz scope, a counter. It's a recorder, an in-circuit component tester and logic probe.

Plus it's graphical. You're not just reading numbers. You're seeing problems. And solving them faster.

And this isn't just any tool. It's a

Fluke. So you know it's as reliable as it gets.

We could go on and on here. But we'd rather have you try it – free for a week. Call 1-800-59-FLUKE.

Take it easy next week.

**Try the Fluke
860 Graphical
MultiMeter FREE
for one week.
